## **DETAILED ACTION**

### **Allowable Subject Matter**

Claims 1-3, 25-28, 29-35 are allowed over prior art of record. The following is a statement of reasons for the indication of allowable subject matter:

The art of record did not teach or suggest the claim taken as a whole and particular the limitation pertaining to the “comparing a first segment of the portion of the input video signal captured by the temporal sliding window of initial length L seconds to a portion of stored fingerprint data; expanding the temporal sliding window to have an expanded length approximately equal to the length of the stored fingerprint data if the first segment of the portion of the input video signal matches the portion of stored fingerprint data

" and “ if the captured portion of the input video signal matches the portion of stored fingerprint data, capturing an additional portion of the received input video signal, the additional portion being contiguous with the captured portion, such that an entire captured portion comprising the captured portion of the received input video signal plus the additional portion has an entire captured length that is approximately equal in length to the total fingerprint length of stored fingerprint data”.

With respect to independent claims 1, 29; Logan et al disclose a user would match the marking signals received from the first communication system against the buffered broadcast program content in order to modify the program; the splicing processor 104 can operate responsive to a marking signal to generate a composite proprietary program signal that removes an indicated program segment, such as a sequence of commercials, and replaces it with a video signal, such as a screen saver image, stored within the local database; the system can include a database memory that stores a segment identification signal. The segment identification signal acts as a type of fingerprint for identifying a portion of a broadcast. Brandt et al disclose the slides in the output slide set are temporally correlated to the video input stream. Ficco et al disclose the ad segment selected by step 240 has a length less than the entire, original broadcast advertisement. If so, then the remaining time slot must be filled in by step

Art Unit: 2425

280. This fill-in process may be performed by selecting another advertisement or by repeating the adapted advertisement until the time slot is filled. Dimitrova et al disclose a system for detecting black frames. Iggulden et al disclose a system where each segment of a television signal is detected and compared to stored signature pattern representative of selected segments such as commercial. Herley et al disclose the selected portion of the media stream is directly compared against similar sized portions of the media stream in an attempt to locate a matching section of the media stream. These comparisons continue until either the entire media stream has been searched to locate a match.

But Logan in view of Brandt further in view of Ficco and further in view of Dimitrova Herley and any of cited references did not teach or suggest, alone or in combination the feature of "comparing a first segment of the portion of the input video signal captured by the temporal sliding window of initial length L seconds to a portion of stored fingerprint data; expanding the temporal sliding window to have an expanded length approximately equal to the length of the stored fingerprint data if the first segment of the portion of the input video signal matches the portion of stored fingerprint data " and " if the captured portion of the input video signal matches the portion of stored fingerprint data, capturing an additional portion of the received input video signal, the additional portion being contiguous with the captured portion, such that an entire captured portion comprising the captured portion of the received input video signal plus the additional portion has an entire captured length that is approximately equal in length to the total fingerprint length of stored fingerprint data" as recited in combination with other features of independent claims 1 and 29.

The dependent claims 2-3, 25-28, and 30-35 are allowed because are further limit independent/parents claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2425

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dimitrova et al (6100941) disclose apparatus and method for locating commercial disposed with a video data stream.

Iggulden et al (20050015795) disclose an apparatus and method for selectively altering a televised video signal in real-time.

Logan et al (7055166) disclose apparatus and method for broadcast monitoring.

Herley et al ( 7461392) disclose system and method for identifying and segmenting repeating media objects embedded in a stream.

Ficco et al (20050166224) disclose broadcast advertisement adapting method and apparatus.

Brandt et al (6646655) disclose extracting a time-sequence of slides from video.
